

AEB

About the Company

AEB's cloud-based software automates and optimizes processes in global trade and logistics while ensuring compliance with complex and frequently changing requirements of authorities around the globe and all partners in the supply chain. More than 5,500 customers benefit from greater transparency, cost reductions, and increased customer satisfaction. AEB was founded in 1979 and has more than 600 employees today. The software company has its headquarters in Stuttgart, Germany, and runs its own data centers on site. 16 offices in 11 countries serve customers in 80 countries across industry sectors.

Products & Services

AEB's portfolio extends from standard software products to a tailored and highly adaptive logistics platform. Standard software manages regulated processes including communication with customs authorities or carriers and checks for legal compliance in the background of business transactions – automated, fast, and without interrupting operations. AEB's cloud platform empowers companies to perfectly blend standard solutions with a flexible technology suite for custom-tailored apps that deliver a competitive edge. AEB's solution design principles drive supply chains to become highly adaptive to ever-changing requirements while keeping costs down and service levels up at the same time.

Cloud Software Portfolio

- [Logistics and Supply Chain Management](#): AEB's warehouse and transport management software enables companies to significantly lower costs and reduce lead times while enhancing on-time performance and customer satisfaction.
- [Customs Management](#): AEB features a single, central platform for all digital customs processes. For imports and exports. With direct filing options and standardized access to an integrated network of customs brokers worldwide.
- [Trade Compliance Management](#): AEB offers a comprehensive set of software solutions to protect against violations of global trade rules. For worldwide export controls and sanctions list screening. Including automated classification, end-use checks, and bans on direct and indirect provisions.

Key Advantages

- AEB combines powerful standard software products with the ability to deliver these in custom-tailored suites that make a difference – with a deep understanding of customer challenges and extensive experience in delivering benefits fast.

- AEB features a most integrated and holistic software portfolio for global trade and logistics processes from offer to delivery – all elements following the same principles and exclusively developed by AEB employees.
- Extensive track record from thousands of successful implementations across sectors and ranging from midsize companies to multi-national corporations such as BASF, GE Healthcare, Kellogg's, Pfizer, and Volkswagen. ([More references](#))

Partnership Opportunities

AEB is interested in expanding in the US to compliment the portfolio of service providers and consultancies that support businesses in streamlining their global trade and logistics processes. They would like to meet such companies to discuss how AEB cloud solutions can help them grow and improve their market offer.
