

Organic Energy Worldwide

AHK Italy

October, 13th 2020

Internationality

300 Plants

25 Countries

5 Continents

Our Business Areas

We cover the entire value chain "Biogas"

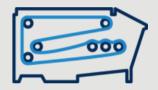

Plant construction

Service

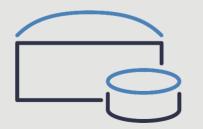

Slurry and digestate processing

Interim management

Own operations

Heat contracting

Subsidiary

Nordmethan

- Founded in 2008
- Acquisition, planning and long-term operation of biomethane and biogas plants
- Consulting, energy trading and CHP contracting
- Offices in Vechta and Magdeburg
- Plant locations in Lower Saxony, East Germany and Hesse
- Around 40 employees

Reference plants

Reference plant Agriculture

Semiana, Italy

Project data

Start of construction: August 28th, 2012 Commissioning: November 7th, 2012 Full-load operation: December 19th, 2012 Input materials: Maize silage

> cow slurry water

separated liquid

Technical data

Digester: 2x 4,000m³ Secon-stage digester: 4,000m³

Storage tank: 1 tank Ø33,5m CHP: 1 MW_{el} in total Miscellaneous: Separation

Characteristics

This facility is a clear example of the fast construction of stainless steel digesters. Due to the special modular system, the plant was put into operation after only 2.5 months and already four months after start of construction the plant was on full load.

Reference Plant Biomethane

Jeppo, Finland

November 2013

750kW

Potato peels, vegetable remains, manure, grass and straw

3 Digester á 4,000 m³

The biogas is partly converted into electricity with the CHP. The other part is processed to biomethane and is available in large gas tanks as vehicle fuel or for the industry.

Reference Plant Waste-to-Energy

Pontefract, England

December 2019

850Nm³/h Biomethane 500kW CHP

Food leftovers, but also grass / green rye silage and cattle & chicken manure

5 pre-storage tanks made of stainless steel

4 digester of 6,848m³

2 push floor dosing feeder (110 & 200m³)

2 **MULTI**Mix

With the energy produced, about 9,600 households can be supplied. The gas upgrading works with membranes.

Reference plant sewage sludge

Burgebrach, Germany

April 2016

25kWel + 58kWth

Sewage sludge with 4-4.5% DM content

1 digester of 420m³

- Reduction of COD loads in sewage by about 1/3
- Minimization of odor emissions

Thank you!
