Concept

The Idea is, to provide a 100% Solution of Energy Consulting to you.

With 100% Solution we will offer a package of services around Energy and Consulting

- The consulting himself
- Doing the defined arrangements
- Doing the maintenance

The Consulting

The Energy consulting will be based on german standards and the international standard ISO DIN EN 50001. It is containing the following:

- Overview of the current situation of energy consumption for the objects.
- Detailed Information about the possible savings and cost.
- The necessary steps to achieve the savings.
- An economic efficiency calculation.
- A report with all informations included.
- Final, the Certification

The Arrangements

To achieve the promised savings, it is necessary to do some arrangements and to train the staff.

We will offer the following services:

- Project Management to plan, organize and control the work
- Find partners and place orders on local companies, whenever it is possible
- Train the staff
- Prepare the complete documentation

The Time after

To be sure that the promised savings are continuously achieved we offer you the following:

- Maintenance of all affected systems with local Partner Companies
- Repair of the systems when it is necessary
- Control continuously the power consumption

The Process

It is possible to do the 3 steps separatly

First Step Energy consulting:

Initiating with a Kick-off meeting to define the content of the consulting and ending with a meeting to present the Report.

Second Step the Arrangements:

Initiating with a meeting to define an agreement for arrangements. Doing the Project Management and ending with an audit for all done arrangements.

Third Step the Time after:

Monitoring of all components when it is necessary and pace orders, when possible to local companies, for maintenance and repair of all components.
