

Job opportunity with NIVUS GmbH as a Software Developer

Location: Chennai

We <https://www.nivus.com/en/> are a leading supplier of innovative measurement systems and software solutions for process engineering. With more than 50 years of experience in water industry, we develop and produce metering systems for level measurement and flow measurement as well as application oriented measurement systems. Providing a consistent automation software and cloud platform up to process control system, we offer bespoke IoT solutions and help our customers to analyze and to optimize processes and plants.

Role & responsibilities:

- You implement frontend and backend functionalities in our platform
- Together with our agile team you develop and implement cloud based applications
- You integrate cloud platforms and APIs

Preferred candidate profile:

- You are a passionate software developer and enjoy working in agile teams
- You have a University degree in computer science
- You have experience with common web technologies like JavaScript, Angular and HTML5
- You also have experience in the cloud environment, ideally with MS Azure, MicroService, .NET and C#.
