

Saacke Marine Systems

**Leading German firing technology specialist seeks Australian business partner –
Virtual meetings from 24th – 27th November 2020 available**

Company Profile

SAACKE is a medium-sized, family-owned company located in Bremen, Germany.

For more than 80 years SAACKE has been involved in firing technology and therefore today is one of the leaders in this field worldwide. They plan, develop and produce burners and system solutions for industrial thermal processes. Products and services of SAACKE are represented in industry just as on ships and offshore installations.

The company has its own Marine Systems division which provides reliable, environmentally friendly and energy-efficient firing plants for sea-going vessels, offshore plants and LNG tankers. Both, standard configurations as well as plants with individual and tailored systems are offered. Some examples are: gas combustion units (GCU), composite marine boilers (CMB), fired marine boilers (FMB) and exhaust gas Scrubbers.

Customers can also rely on SAACKE when wishing for conversions of already existing plants. Within this work standard components or plants are integrated into existing systems or alternative possibilities are developed.

SAACKE further has several international production plants as well as a worldwide service and sales network and therefore is represented on every continent.

Products / Services

- Gas combustion units (GCU) for gas tanker and LNG bunkering vessels
- Composite marine boilers (CMB) which are mainly used on container vessels or bulkers
- Fired marine boilers (FMB) for each type of vessel including Cruise liner and Offshore applications (FPSO/FLNG/FSRU/FSU)
- Exhaust gas Scrubbers for compliance on IMO 2020 regulations

Competitive Advantage

Great flexibility in design as we have a deep in-house production for our products. Especially in the marine business it is important to have a very good service network and access to each point of the world. This service network we have in place since many years with more than 50 offices all over the world.

Project Partners:

References and export activities

- Leader in GCU systems for LNG bunkering vessels worldwide
- Leader for boiler systems on cruise vessels especially for dual fuel systems.
- We have delivered more than 4000 boiler systems to each type of commercial vessels
- We have delivered and commissioned more than 100 GCU systems for LNG carrier
- We have delivered boiler and WHRU's to several offshore projects
- We are the first company which got DNV-GL approval on a hybrid scrubber unit
