

Job opportunity with NIVUS GmbH as a DevOps Engineer

Location: Chennai

We <https://www.nivus.com/en/> are a leading supplier of innovative measurement systems and software solutions for process engineering. With more than 50 years of experience in water industry, we develop and produce metering systems for level measurement and flow measurement as well as application oriented measurement systems. Providing a consistent automation software and cloud platform up to process control system, we offer bespoke IoT solutions and help our customers to analyze and to optimize processes and plants.

Role & responsibilities:

- You are involved in the implementation of development projects in agile and interdisciplinary teams
- Your focus is on the CI/CD pipelines, which you develop, automate and maintain yourself.
- You also take care of the build and deployment infrastructure
- You monitor and optimize the operation and infrastructure of the solution in the cloud environment
- Together with the team you develop the appropriate software design

Preferred candidate profile:

- You enjoy the agile development of cloud solutions as part of a team
- You have a University degree in computer science
- You have a sound knowledge of continuous integration, continuous deployment and infrastructure as code.
- You also have experience as a .NET and C# developer
- You also bring Docker, Kubernetes and Azure platform experience to the table
