\* February values refer to missing January values due to statistical shift from the Chinese New Year to January and February.

Explanatory notes: (a) While the second dataset on the second page are monthly updates, the first are the accumulated amounts from the start of the current year, except FAI, CPI and PPI. While FAIs are also accumulated accounts, PPI and CPI are the monthly averages. (b) Trade data with Germany are published with a delay of a few months in both sections. (c) Markit PMI's are focused on SMEs, while NBS PMIs have a focus on large state-owned enterprises. Values over 50 reflect an expansion, values below 50 reflect a contraction. (d) For values marked "n.a." or (-), no official data is available or is not yet available for the current status. (e) "% growth" refers to the respective period of the previous year. (f) Deviations due to rounding possible.
